# The Howard Banta Alarm Clock Chapter

Chapter178.nawcc.org

September 2021

### **President's Message**

I am happy to announce that we have done a great job with the Howard Banta Alarm Clock Chapter Newsletter. I believe that all the hard work done by many of our members has made this a great Newsletter.

In this issue there are contributions by Charles Lindquist with an article on how to take hands off an alarm clock. I have tried this, and it works great. And, another longtime member, Joel Sarich, has introduced one of his most unusual alarm clocks. You will enjoy his article also.

In addition to these two members, I would like to thank Dennis Sagvold for his many articles and interest in alarm clock collecting which he has generously shared with us.

I would like to encourage more members to send ideas for articles and possibly their own articles to either the Editor Bob Linkenhoker or myself so that we can help publish them.

In addition to thanking Charles, Joel, and Dennis for their articles I would also like to thank member John Koepke for sending me photos of alarm clock pages from a 1925 Catalog that he just acquired. We have printed his photos and included them with this Newsletter as a Supplement. Hope you enjoy this Supplement.

Kevin Osborn from the National has sent me an address link to our Chapter's site making it much easier to locate old and new newsletters on our computers. You will find this address link on the upper left-hand corner on the cover page of the Newsletter.

The address is **Chapter178.nawcc.org**. When trying this address just copy it in the far upper address bar or URL bar of your browser. Not in a SEARCH window. After you have put this in that upper bar, press ENTER and it should take you to the HBACC website in the NAWCC website. If you are having a problem, please contact me at my email address <u>phylathome@hotmail.com</u> or call me at 916-952-4961.

Vince Angell

This newsletter contains material from: Dennis Sagvold Vince Angell Charles Lindquist Joel Sarich Chris St Dennis My thanks to all who send material. Bob Linkenhoker

#### **EDITOR'S NOTE:**

<u>Remember that there will be no newsletters</u> unless the members of Chapter 178 send me information and pictures. I am sure that you all enjoy reading and looking at the various pictures in this and the other newsletters produced for this Chapter. Just remember unless you help there:

WILL BE NO NEWSLETTER E-mail to rlink3@juno.com or mail to:

Chapter 178 7186 Calico Circle Corona, Ca. 92881

#### **ERRATUM**

Dennis Sagvold has reported an error in the last newsletter. The patent date on his Blinking Eye Clock should be 2 Dec 1894 not 2 Dec 1984.

Kathy Lindquist is working on placing items that her late husband left into the hands of those who would appreciate them,

One of these is a box of various Westclox boxes. Vince has indicated he already has these boxes, but perhaps other chapter members would like to have them.

I would be happy to send them out at no cost (other than the recipient perhaps paying mailing costs)

If interested Please Contact Charles Lindquist at <u>gvrunner99@yahoo.com</u>

#### **Removing Alarm Clock Hands By Charles Lindquist**

Since I got re-infected with an interest in alarm clocks (thanks to Vince!) almost all of the small number of alarm clocks I have are in running order. Until I got this blue Monitor Bell-on-the-top tin can. Broken time mainspring.

I would like any clock in my small collection to be in running order. Maybe not good enough to return to a paying customer with a one-year guarantee, but good enough to run for a day or a week and more or less keep time. In the 1960's when I did trade clock repair for two years, I would always shudder a bit when a 1940's vintage Big Ben or Baby Ben would show up. Once the hands and dial were removed, we would clean the assembled movement in an industrial L & R clock cleaner machine, big brother to the familiar L & R Watch cleaner. The barrel springs were removable, and it was a decent cleaning job. The fear factor was getting the hands off without bending the collar, or otherwise marring them. We had "professional" hand pullers, but they didn't seem to work so well here. We used a pair of diagonal cutters with a notch in both sides and hoped for the best. Worked pretty well then, the clocks were newer, and I had better strength.

So fast forward to today, the object blue alarm clock. It's manufacture date was 07/25/28 (marked on the inside of the plate so you really had to want to see it). Ninety-three years old and both the alarm and minute hands well stuck on, welded with the oxidation of the years. This clock did not have a removable barrel spring, so the movement had to come apart and that meant the hands must come off.

Dozing one night, a possible solution came to me. If I could hold the other end of the minute hand shaft gently in a vice, could I use an end nipper to remove the hand and not bend anything? Worked like a charm! Each hand popped off without any marring or damage. Since then, I have begun to use the end nipper as my preferred hand removal tool and highly recommend it!

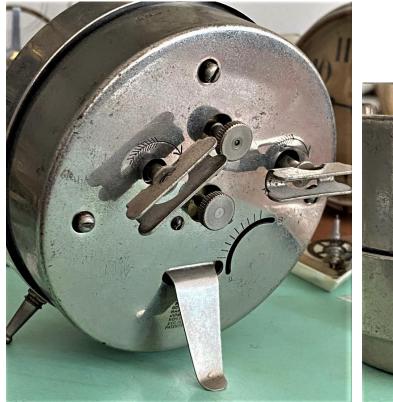

The clock disassembled

### **Joel Sarich**

Here's an odd one! A style one Bingo! Notice the fancy 2, 5, and 7 on the dial. The movement is dated 10 18 20. It is a straight "repeater" alarm clock with no way to make the ring steady, much like the later Big Ben Loud Alarms. The movement is just like the Big Ben movement of the period. Note the little alarm shut off lever at the top of the clock. It acts directly on a peg mounted right on the ratchet part of the alarm lever. When the alarm is shut off the hammer is held tight against the bell. The movement lugs which mount the movement directly to the back of the case seem to stick out more on this model than the model 1A Big Bens. This particular clock is also lacking its "Ring "at the 12 position on top of the clock. It would take a slightly smaller one than the peg leg Big Ben.

### When You Think You Have Seen Them All, Another One Shows Up! By Vince Angell

I have been collecting Parker Alarm Clocks for about 30 years. Not only Parkers but also the earlier company of Parker and Whipple. In these 30 years I have seen what I thought were almost all the models. This includes the models in some of the Parker catalogs that I have never seen at all.

Looking through eBay a couple of months ago I saw a very interesting alarm clock which was described as a Parker Alarm Clock. After looking at the picture the dial did say Parker. They were asking \$49.00 plus shipping. Rather than buying it at that point I just put it on my "Watch list". I had not seen this model before, and it seemed to be extremely unusual. Within an hour I was sent an email asking me to purchase it for \$38.00 plus shipping. With a stroke of my finger I hit the "Buy It Now" button. Five days later it was at my doorstep. The clock was missing the bell on the back but I had a spare bell that I took off of a junker. Interestingly enough it did not fit the rotary hammer but appeared to be a much larger bell. I had noticed on the back that there was a round wear mark close to the edge of the case. This measured 3-1/2 inches in diameter. Within an hour of looking for bells I found one on eBay that I thought might be a perfect size. And as it turns it was perfect! Not bad for \$10.00.

On the next page is the clock that I purchased. I have NEVER seen this model before!! The first thing you should notice is that the front glass and bezel have a hinge on it. There also are no alarm or time setting knobs on the back. By opening the glass door, you have to manually turn the time hands and also the alarm hand. The most unusual things I thought this clock had were the Time and Alarm winding holes. They both take a regular clock key to wind and the spring was very heavy that I assumed because of that and its weight, IT WAS ALSO AN 8-DAY!

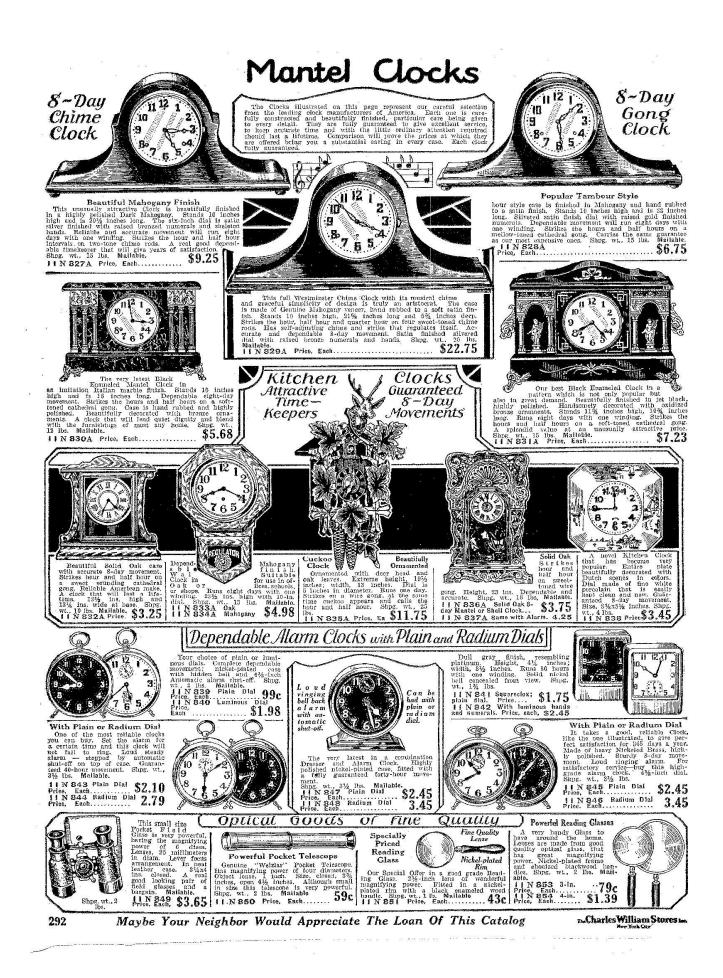

### **Turn The Page and Enjoy The Pictures!**

### Nickel Novelties.

PET-Long Alarm- · Patented."

One Day Nickel Alarm. 4<sup>1</sup>/<sub>2</sub> INCH DIAL. HEIGHT, 6<sup>3</sup>/<sub>4</sub> INCHES. Fitted with Second Hand. Alarm rings 8 minutes with one winding, but can be cut off at pleasure by Switch Key.

List each, . . . . . . . . . . \$2 15

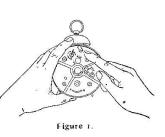

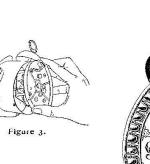

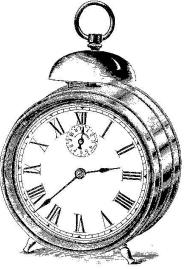

Figure 2.

Movements to all the above Clocks can be removed and replaced in 4 seconds, as described below.

No screws to lose or threads to strip.

ARTISTIC—Long Alarm—Patented One Day Nickel Alarm. 4<sup>1</sup>5 INCH DIAL. UEIGHT, 6<sup>3</sup>1 INCHES. Fitted with Second Hand. Alarm rings 8 minutes with one winding, but can be cut off at pleasure by Switch Key.

Gilt Perforated Dial, . . List each, \$2 50

DIRECTIONS.

To remove movement from case, wind up springs, slide latch near Alarm Key to left (Fig. 1); pull from top gently (Fig. 2), then from the bottom (Fig. 3), exercising care to avoid bending the hammer. To replace, enter hammer through opening under bell, push back squarely into case; see that indentations in bottom and back of case

agree; then press top of back firmly and turn latch to place. While simple to the skilled workman, the works cannot easily be removed by the purchaser without directions.

#### These two Catalog Pix are from Dennis Sagvold

## FOR SALE

The following 3 clocks are offered for sale by Chris St.Dennis. If you are interested in any contact her at chrisstdennis@yahoo.com

WESTCLOX BUNKIE ALARM \$35 OBO

PARKER ALARM IN THE MISSION STYLE \$75 OBO

Black Mantel with an Alarm Feature \$65 OBO
